## Grazing & Consulting for Healthy, Productive Land

### Grazing Services

#### Weed Management

Leafy Spurge, Knapweeds, Larkspur, Canada Thistle, Hounds Tongue, Common Tansy

#### Brush Management

Salt Cedar, Juniper, Russian Olive, Hawthorne, Buck Brush, Pine

#### Land Reclamation

Reseeding  
Soil Remediation

#### Fire Management

Firebreak Construction  
Fuel Reduction

### Range & Wildlife Consulting

#### Habitat Assessment

identification and classification

#### Grazing Planning

increase productivity;  
improve habitat

#### Monitoring

range vegetation and wildlife

#### Research

design, implementation,  
analysis, and distribution

### Why use Terra Vita goats?

Our management is the key.

Site specific plans to ensure weed problems are addressed correctly.

We manage for health of desired plants at the expense of unwanted plants.

We treat the cause of a problem (rather than symptoms).

Scientifically sound, with monitoring to ensure progress.

Goats selectively graze weeds and brush over grasses.

Goats recycle nutrients in the form of dung and urine, fertilizing desired perennial grasses.

**“I was really in a quandary as to how to work with my land, which had been infested with weeds for over ten years. I was willing to try anything to avoid spraying as the land is part of a major wildlife corridor. It was fascinating to see 650 goats descend on my property and start munching away...I can't wait for the new healthier growth to come up this spring!”**

— Bear McKay, Rocky Mountain School of Healing
